Melbourne, VIC | 0406 702 565 | jefgarcia@gmail.com | [linkedin.com/in/jefgarcia](https://www.linkedin.com/in/jefgarcia)

PROFESSIONAL SUMMARY

Quality Engineer with 10+ years' experience across digital banking, payments, mobile and web platforms, spanning ANZ, ANZ Plus, Cash App and Crown Resorts. Specialises in mobile quality engineering (iOS/Android), API validation, test strategy and defect management within complex financial and Agile environments. Builds practical automation and AI-assisted tooling — including Claude Code-based reporting skills — that cut manual effort and lift team consistency. Known for identifying risk early, mentoring test analysts, and helping squads ship secure, reliable, customer-focused releases.

KEY SKILLS

Testing & Strategy: Manual, exploratory, regression and risk-based testing; test strategy, test case design, execution, defect management and coverage analysis; API validation (Postman)

Mobile & Automation: Mobile quality engineering across iOS and Android; XCUITest, Espresso, Barista, Appium, Maestro; web automation with Cypress, Webdriver, JavaScript and TypeScript; Bash scripting for API testing and reporting

Domain: Digital banking, payments, cards, accounts, statements, notices and customer engagement; cross-border payments and commercial banking

Tools & AI-Assisted QE: JIRA, Xray, GitHub, GCP, Dynatrace, Postman; AI-assisted quality workflows using Claude Code for reporting, scripting and process automation

Leadership & Delivery: Agile delivery and squad collaboration; stakeholder communication, quality coaching and mentoring; accessibility and inclusive quality practices; bug bashes and release support

PROFESSIONAL EXPERIENCE

Senior Quality Engineer (previously Mobile Quality Engineer)

ANZ Plus, Docklands

March 2024 – Present

Promoted to Senior Quality Engineer in June 2024 in recognition of expanded ownership of test strategy and team mentoring.

- **Since promotion:** own test strategy for the Business and Private Banking domain, setting the testing approach for new commercial features from planning through release.
- Mentor new starters on the squad, onboarding them into mobile QE practices, domain knowledge and team testing standards.
- Extended the Claude Code-based reporting skill to generate a Test Traceability Report alongside the existing Test Summary Report, giving the team end-to-end visibility from requirements to test coverage.
- **Core role:** Own quality across Statements, Store & Engagement, Accounts and Commercial banking — validating app behaviour, backend integration and customer communication flows before release across iOS and Android.
- Built a Postman collection to validate banner/notification APIs end-to-end, giving the team a repeatable check across backend and mobile app behaviour.
- Built end-to-end UI automation using Maestro to validate interest rate change journeys, strengthening regression coverage for a high-risk customer-facing feature.
- **Created a semi-automated Test Summary Report (TSR) skill using Claude Code, cutting TSR preparation time from ~30 minutes to ~5 minutes** while improving consistency across the team.
- Improved test data readiness by scripting and documenting setup steps for key testing journeys, reducing reliance on informal/tribal knowledge.
- Wrote shell scripts to chain CLI commands for repetitive setup tasks — e.g. activating card details, or creating a new test user and setting it up with a selfie image in one pass — cutting manual test data setup time.
- Built a proof of concept to automate terminal-based testing of legacy systems via the Mocha TN3270 terminal emulator, enabling faster, more repeatable coverage of workflows that had previously relied on manual command entry.
- Used JIRA, Xray, GitHub, GCP and Postman to manage test activity, track coverage and support release decisions across a complex, fast-changing ANZ environment.

QA Engineer

Cash App, Melbourne

July 2023 – February 2024

- Owned quality for cross-border money movement and payment card connection experiences across iOS and Android for a global payments product.

- **Improved end-to-end XCUITest coverage for international use cases, increasing release confidence** across global payment journeys.
- Developed and maintained test plans for payment card connection flows, adapting quickly to shifting project scope.
- Contributed to Global Banking & Payments team guides and data visualisation tooling used for release decision-making.

Test Engineer

ANZ Plus, Docklands

April 2021 – July 2023

- **Recognised as a top performer** for consistently exceeding expectations and driving team outcomes.
- Coached the squad on mobile automation using XCUITest (iOS) and Espresso/Barista (Android); built an Appium proof of concept in JavaScript to explore future automation coverage.
- Validated payment methods including Samsung Pay, Google Pay, Apple Wallet and Visa Card Controls, supporting major payment initiatives pre-release.
- Wrote Bash scripts for API testing and reporting, improving testing speed, accuracy and result visibility.
- Led bug bashes and ran accessibility/inclusive-design sessions, embedding earlier quality thinking across the squad.
- Used GCP logs and Dynatrace to monitor systems and speed up production issue resolution.

Quality Analyst

MYOB, Richmond

November 2019 – April 2021

- Tested a legacy-to-cloud financial data migration across UI, backend and data quality, identifying risk early to protect delivery.
- Wrote automated UI tests in TypeScript, Webdriver and Cypress, improving regression coverage and release confidence.
- Trained squads on test pyramid principles and onboarded new QA team members through structured training.

Digital Test Lead

Crown Resorts, Melbourne

September 2018 – November 2019

- Led testing across Crown Melbourne and Crown Perth mobile apps, APIs and websites, managing two QA consultants.
- Started reusable automation frameworks (API, Android, iOS, web) to support broader Enterprise QA practices.
- Documented testing standards and embedded testing earlier in delivery, reducing critical/major defects in the Android app.

Senior QA Analyst

Crown Resorts, Melbourne

December 2016 – September 2018

- Led 3 Software Test Analysts on the Crown Rewards Revamp project and reported quality/defect insights to senior stakeholders.
- Owned test plans and defect registers across complex delivery programs, mentoring new Enterprise QA members.

QA Analyst

Crown Resorts, Melbourne

August 2012 – December 2016

- Executed manual and integration testing and coordinated UAT with business units to strengthen release readiness.

EDUCATION & CERTIFICATIONS

Certificate IV in Leadership & Management — Crown College, Melbourne (2017–2018)

Bachelor of Business, Information Technology & eBusiness — Auckland University of Technology, NZ (2006–2009)
